Open AI Transformation Maturity Model

A Framework for AI-Native Software Organizations

O-AITMM · v0.1.0 · March 2026

From Code to Intent — Toward Autonomous Software Delivery

Problem

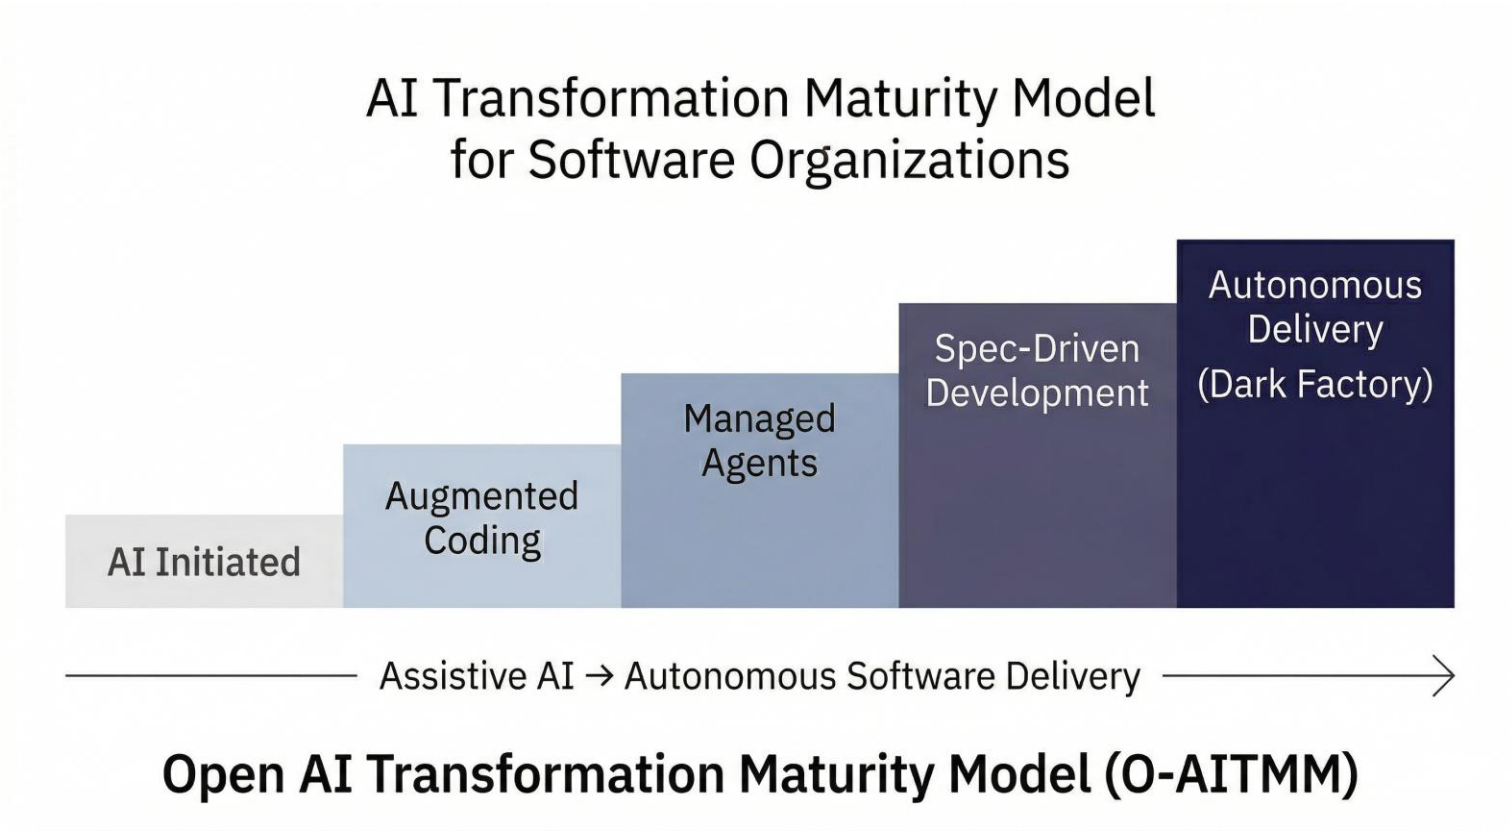
- Fragmented tool adoption across teams
- Local productivity gains without delivery impact
- No shared operating model
- Lack of evaluation, governance, and control
- Pilot success that fails to scale

Bottom line: AI Adoption ≠ AI Transformation

Why This Framework (O-AITMM)?

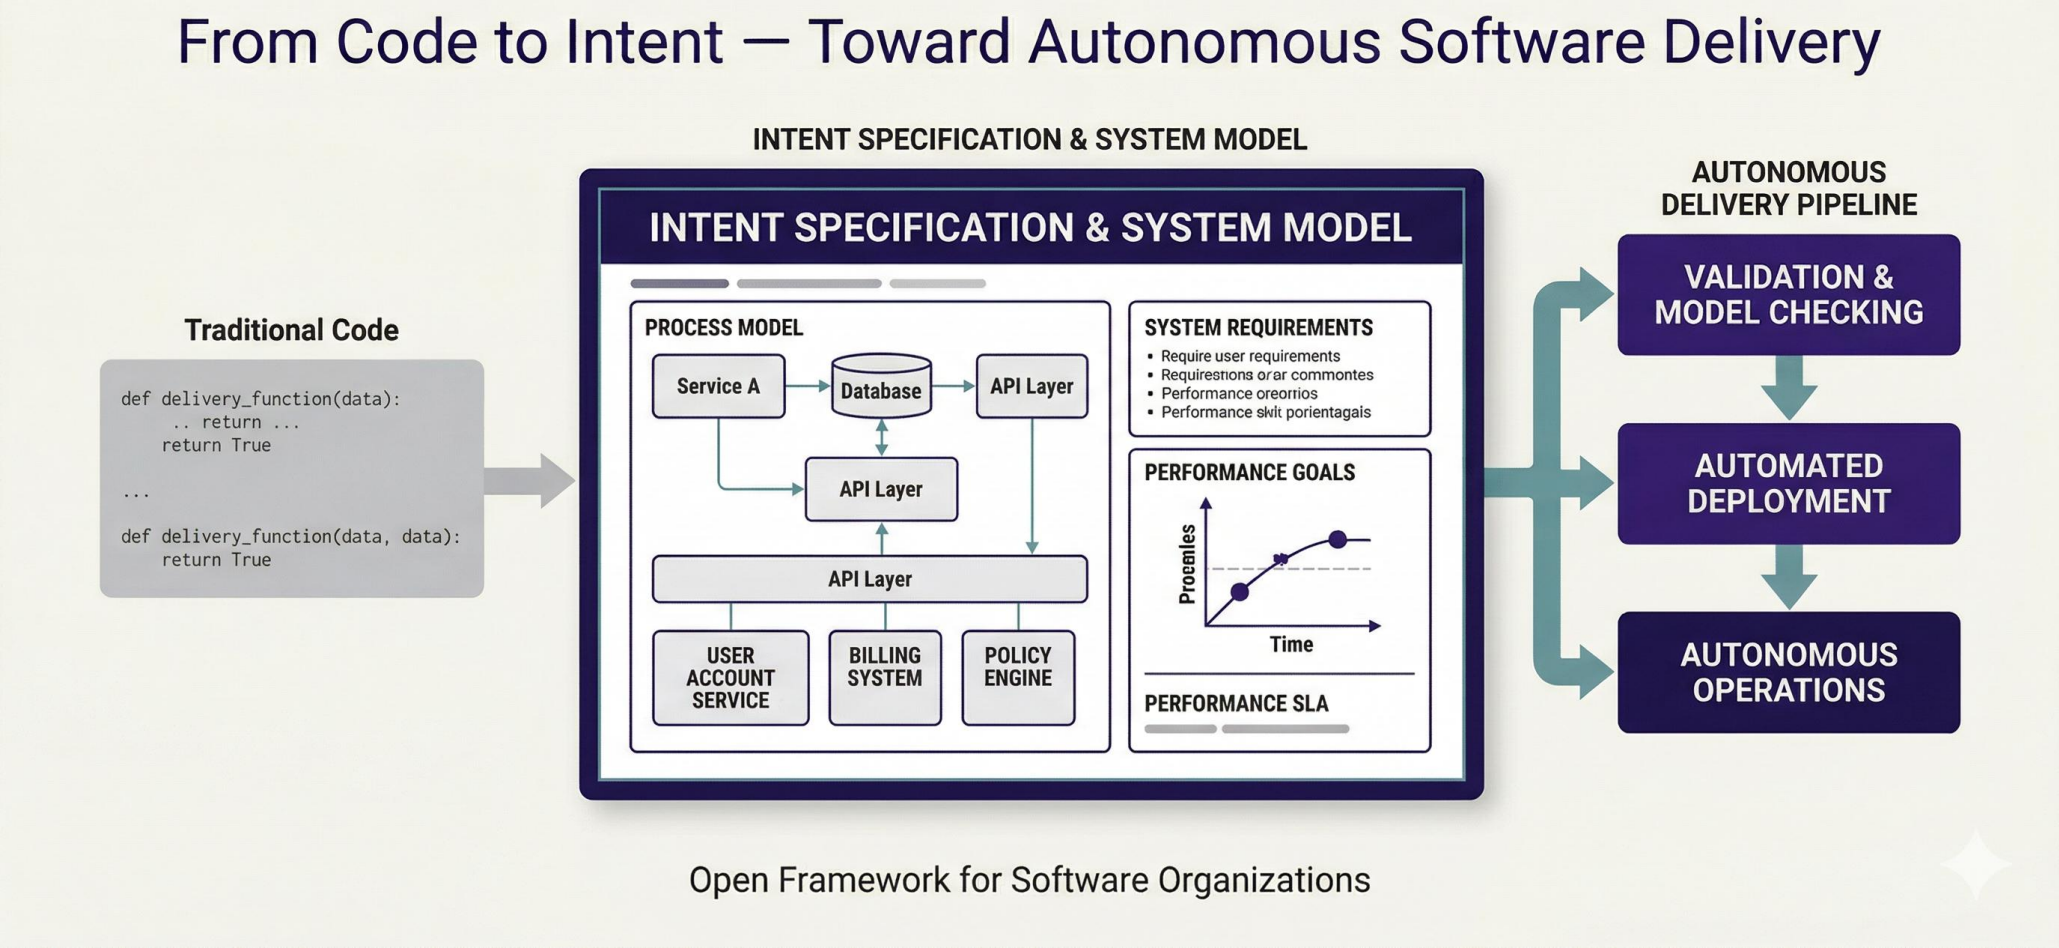
- Organizations need a way to assess real progress toward AI-native delivery.
  - Not tool adoption
  - Not a pilot success
  - But <u>operating model transformation</u>

Five Stages of AI-Native Maturity



KEY SHIFT

Human effort moves upstream: into intent, policy, and oversight!



Transformation Requires System Capability

01
Intent & Specification Fidelity

02
Evaluation & Scenario Architecture

03
Agent Operating Model

04
Delivery System & Controls

05
Codebase Readiness

06
Infrastructure & Tooling

07
Org Design & Governance

Capability Pillars

Seven dimensions of effective maturity

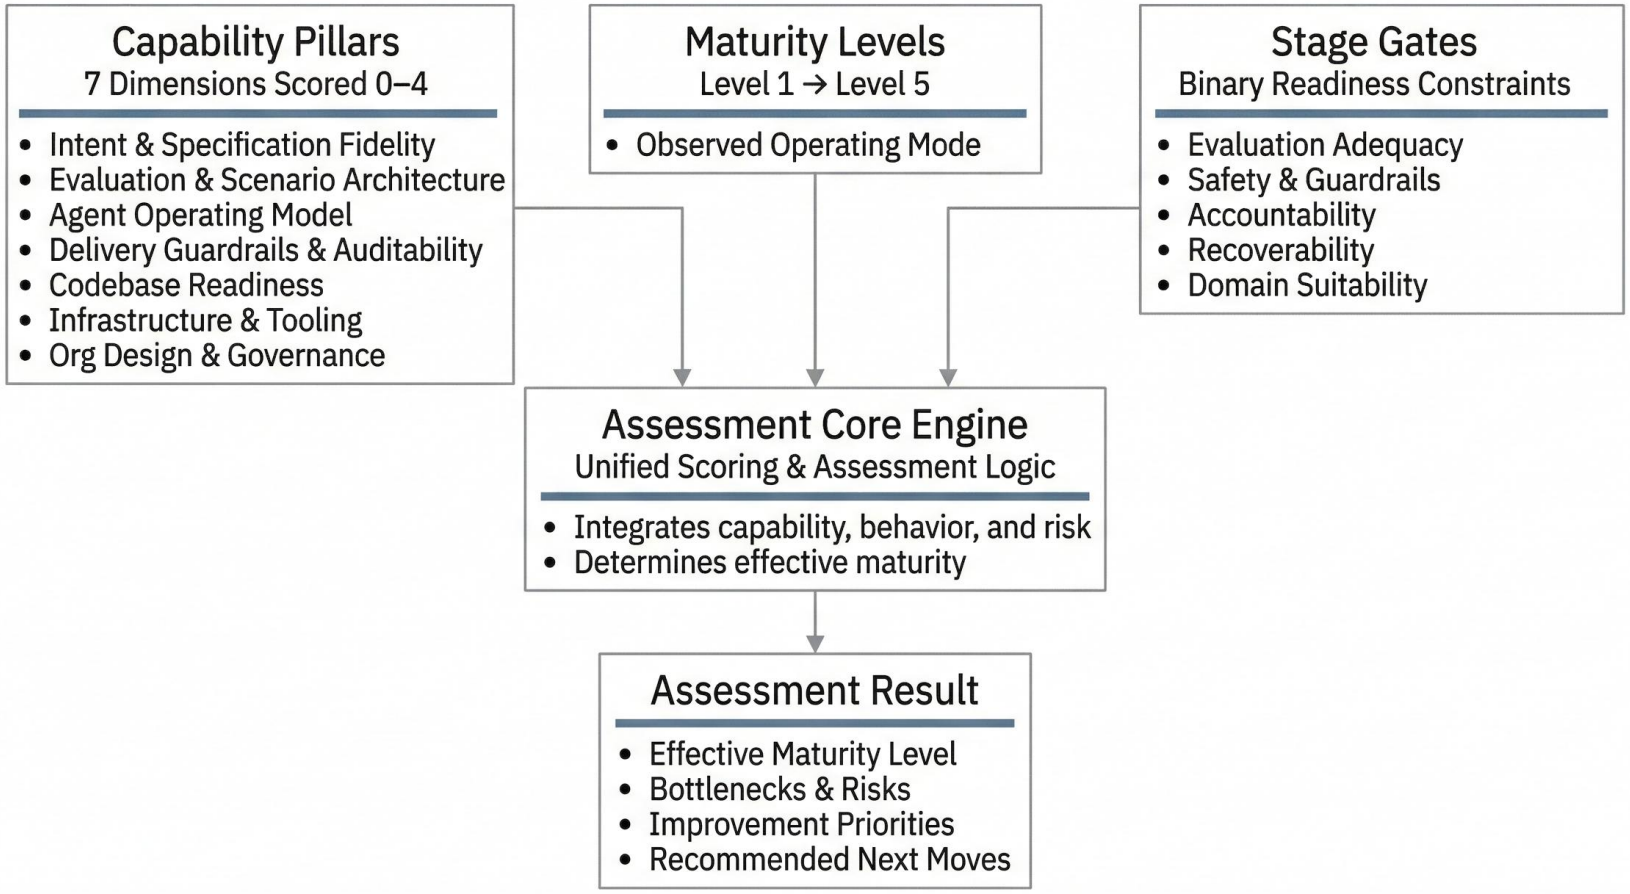
Stage Gates: Safety, Security & Control

Binary constraints that decide the safe progression

- Evaluation adequacy
- Safety & guardrails
- Accountability
- Recoverability
- Domain suitability

How Maturity Is Determined

OAITMM Assessment Architecture



How Organizations Use the Model

Self-Assessment
Evaluate current state against the 5-level model

Roadmap Planning
Build transformation plans across all 7 pillars

Executive Alignment
Establish a shared mental model across leadership

Benchmarking
Compare maturity across teams and organizations

Tooling Evaluation
Assess vendor and tooling fit against capabilities

Risk-Informed Adoption
Navigate AI expansion with governance guardrails

Designed as a Community Standard

This model synthesizes insights from industry practice, research, and real-world experimentation. v0.1.0 is released to invite community collaboration and evolution.

- **Critical Feedback**
- **Practitioner Contributions**
- **Case Studies & Validation**
- **Framework Evolution**

Goal: A durable, neutral reference for AI-native engineering maturity – built by and for the community.
